What is this talk **about?**

- ▶ QUESTIONS? RAISE YOUR HAND OR YELL LOUD

What is this talk **about?**

- The story about the joind.in website.

▶ QUESTIONS? RAISE YOUR HAND OR YELL LOUD

What is this talk **about?**

- The story about the **joind.in** website.
- The story about the **joind.in** Android app.

▶ QUESTIONS? RAISE YOUR HAND OR YELL LOUD

What is this talk about?

- The story about the joind.in website.
- The story about the joind.in Android app.
- The story about mobile API connectivity.

▶ QUESTIONS? RAISE YOUR HAND OR YELL LOUD

What is this talk **about?**

- The story about the joind.in website.
- The story about the joind.in Android app.
- The story about mobile API connectivity.
- The story about android programming.

▶ QUESTIONS? RAISE YOUR HAND OR YELL LOUD

The story about joind.in

Like the talk? **Let 'em know!**

Joind.in provides the missing link between the people attending a conference and the ones that presented.

Attendees can post their comments directly to each of the talks they attended, giving the speaker direct feedback on how they did and what they can do to improve.

Joind.in also has something to offer the speakers - you can track your record across the conferences and see how changes in your talk might have made a difference in your ratings.

Join joind.in now!

The story about joind.in (1)

- Launched by Chris Cornutt (phpdeveloper.org) in 2008
- Adopted by Lorna Mitchell and others.
- <https://github.com/joindin/joind.in>
- Large in the PHP community and gaining ground in others as well.

The story about joind.in (2)

- A website for conference organizers and attendees.
- Find information and give feedback on conference talks (like this one).
- Helps speakers to improve their talks.
- Over 10K registered users and over 30K page views per month.

The story about joind.in (3)

- What events are currently happening?
- Which talks are hot (or not)?
- Should I see talk X or Y?
- feedback = improvement
- your future conference planner

- ▶ USING OTHER APPLICATION'S DATA

Mobile API connectivity (2)

▶ ONE TO MANY

Mobile API connectivity (3)

Is your application **REALLY** ready for mobile connectivity?

Mobile API connectivity (5)

- Mobile bandwidth is expensive.
- Connectivity is slow and unreliable.
- Client side processing is harder.

▶ MOBILE FACTS

Mobile API connectivity (5)

- Not giving client what they want.
- Updating your API will be harder.
- BC breaks are a no-go.

▶ MOBILE FACTS

Mobile API connectivity (6)

- ▶ PROBLEMS WITH THE JOIND.IN API

- Authentication

- ▶ PROBLEMS WITH THE JOIND.IN API

Mobile API connectivity (6)

- Authentication
- Too much data being returned
(>300Kb per request)

▶ PROBLEMS WITH THE JOIND.IN API

Mobile API connectivity (6)

- Authentication
- Too much data being returned
(>300Kb per request)
- No pagination (want first 10 talks, get 200+)

▶ PROBLEMS WITH THE JOIND.IN API

Mobile API connectivity (6)

- Authentication
- Too much data being returned
(>300Kb per request)
- No pagination (want first 10 talks, get 200+)
- Duplicate data (tracks, talks, speaker info)

▶ PROBLEMS WITH THE JOIND.IN API

Mobile API connectivity (6)

- Authentication
- Too much data being returned
(>300Kb per request)
- No pagination (want first 10 talks, get 200+)
- Duplicate data (tracks, talks, speaker info)
- Occasional BC breaks

▶ PROBLEMS WITH THE JOIND.IN API

This will all change in the v2.0 API release.
(hopefully)

Writing (native) Android applications

```
29     super.onCreate(savedInstanceState);
30
31     // Set layout
32     setContentView(R.layout.eventtracks);
33
34     // Get event ID from the intent scratch board
35     try {
36         this.eventJSON = new JSONObject(getIntent().getStringExtra("eventJSON"));
37     } catch (JSONException e) {
38         android.util.Log.e("JoindInApp", "No event passed to activity", e);
39     }
40
41     // Set all the event information
42     TextView t;
43     t = (TextView) this.findViewById(R.id.EventTracksCaption);
44     t.setText (this.eventJSON.optString("event_name"));
45
46     // Initialize track list
47     ArrayList<JSONObject> m_tracks = new ArrayList<JSONObject>();
48     m_trackAdapter = new JITrackAdapter(this, R.layout.trackrow, m_tracks);
49     ListView tracklist =(ListView)findViewById(R.id.ListViewEventTracks);
50     tracklist.setAdapter(m_trackAdapter);
51
52     // Add listview listener so when we click on an talk, we can display details
53     tracklist.setOnItemClickListener(new OnItemClickListener() {
54         public void onItemClick(AdapterView<?>parent, View view, int pos, long id) {
55             // Open event details with additional eventTrack data.
56             Intent myIntent = new Intent ();
57             myIntent.setClass(getApplicationContext(), EventTalks.class);
58             myIntent.putExtra("eventJSON", getIntent().getStringExtra("eventJSON"));
59             myIntent.putExtra("eventTrack", parent.getAdapter().getItem(pos).toString());
60             startActivity(myIntent);
61         }
62     });
```

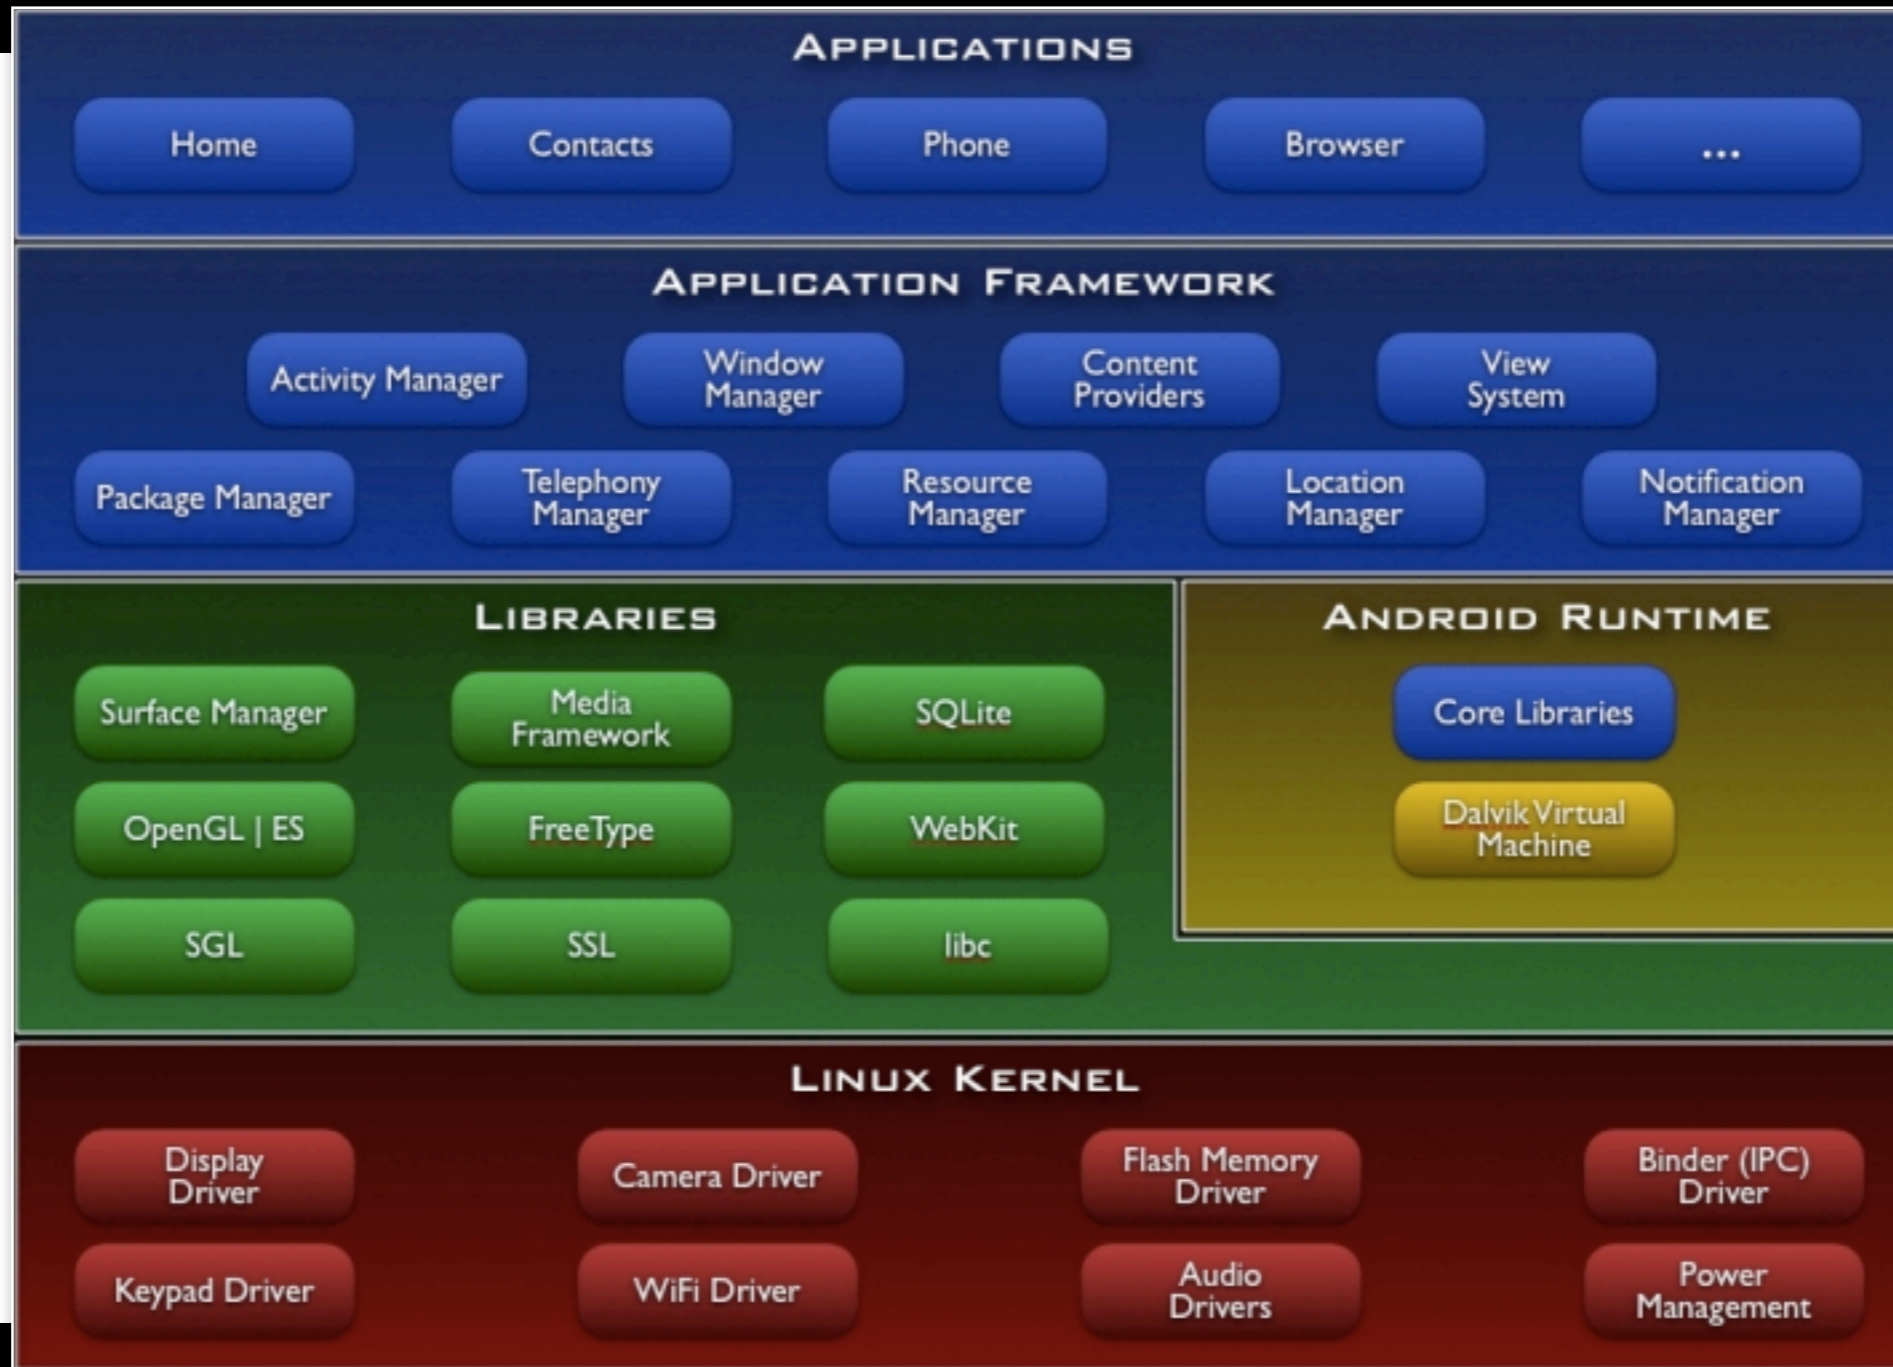

Writing (native) Android applications (1)

Writing (native) Android applications (1)

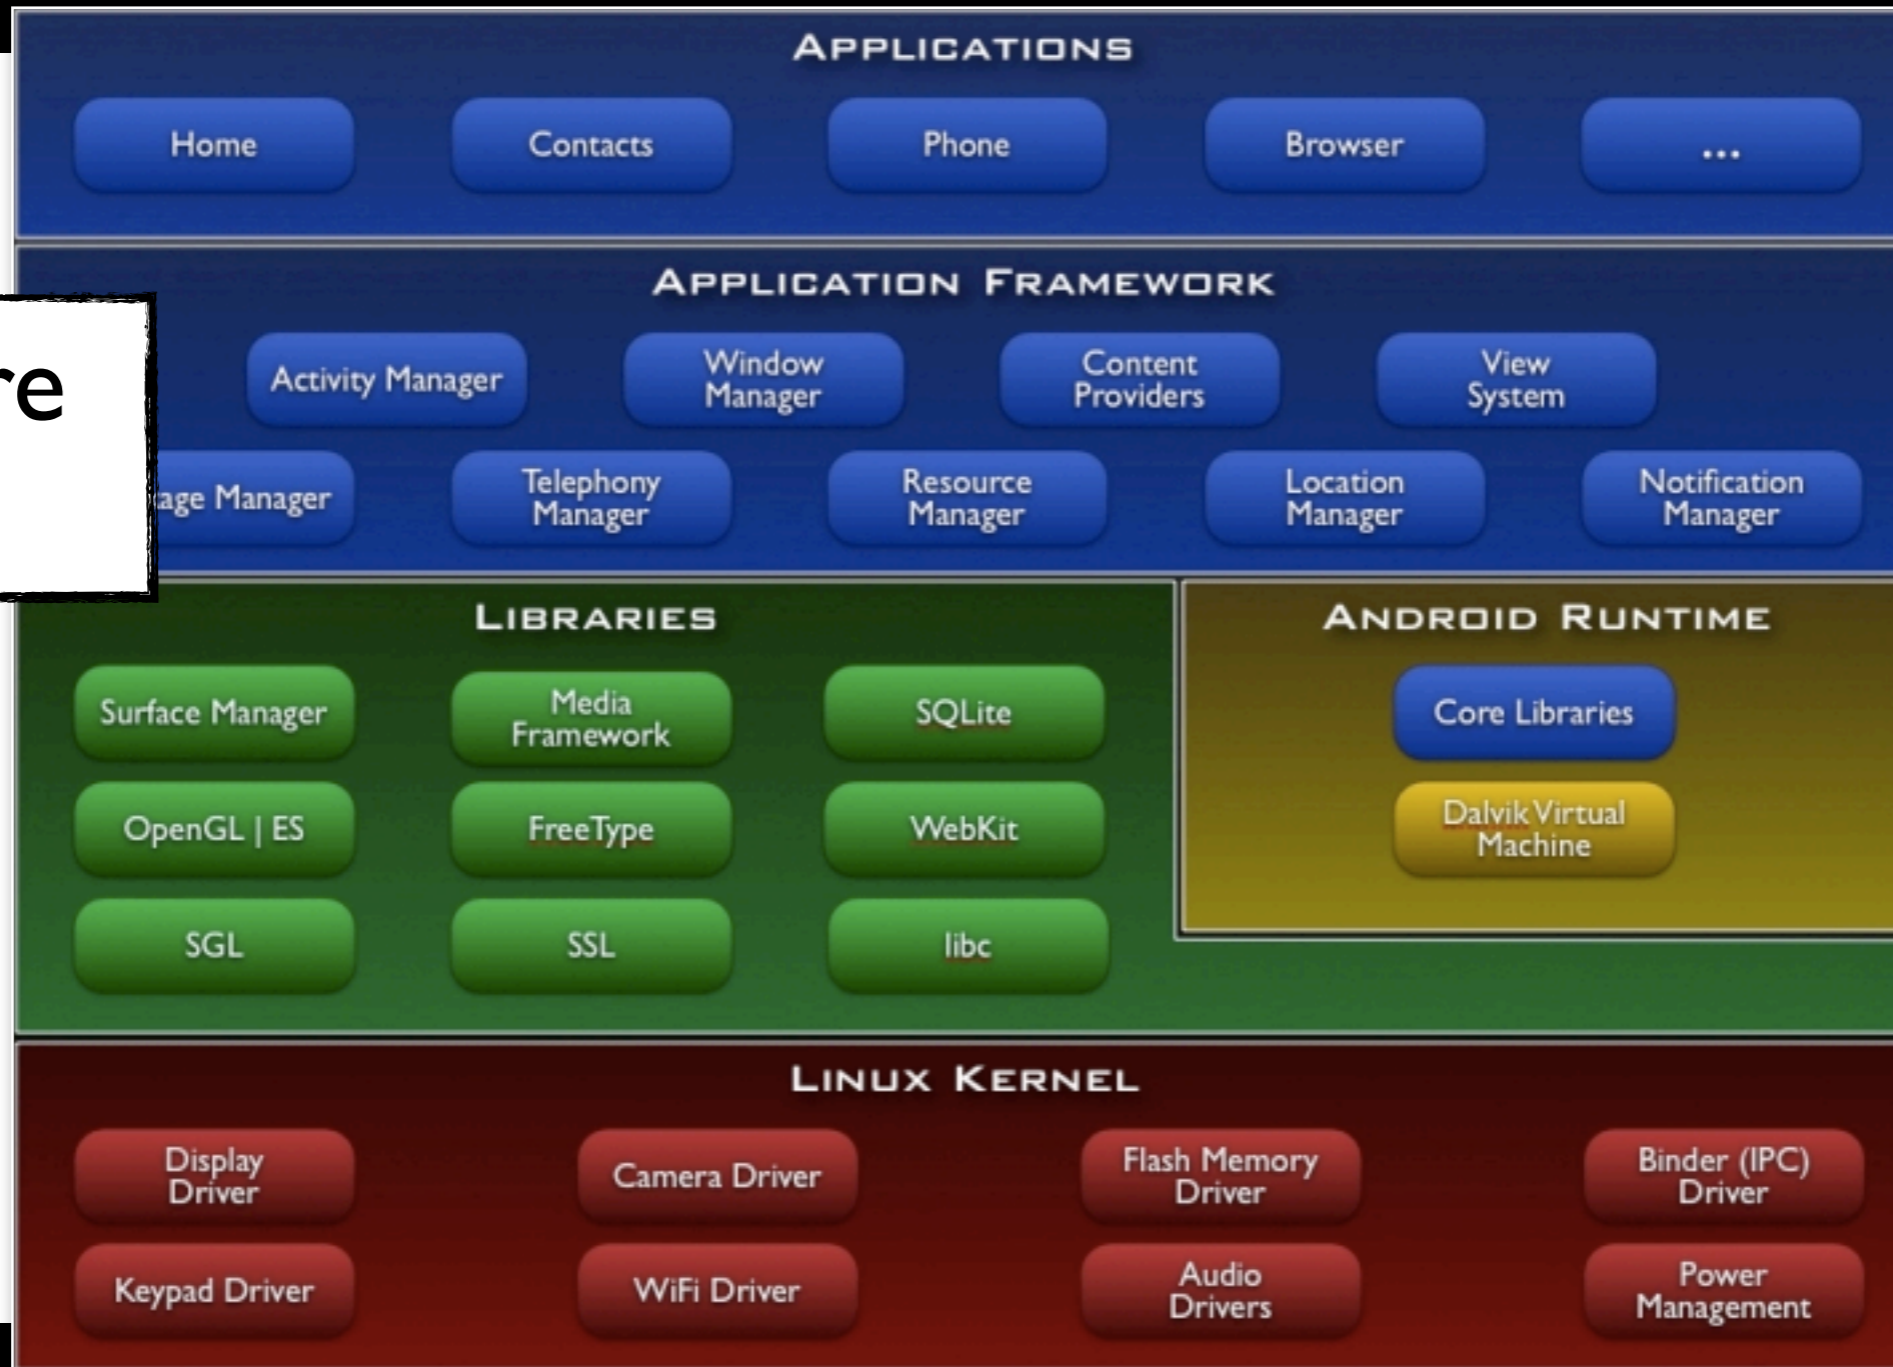

✓ Native (java)

✗ Non-native (php4android, html5/js)

Writing (native) Android applications (2)

Writing (native) Android applications (2)

You are here

Writing (native) Android applications (3)

- **Activities**
- **Layouts**
- **Intents**

Activities (1)

- provides a screen with which a user can interact.

Activities (1)

- provides a screen with which a user can interact.
- activities are “stacked”.

Activities (2)

- activity 1 starts

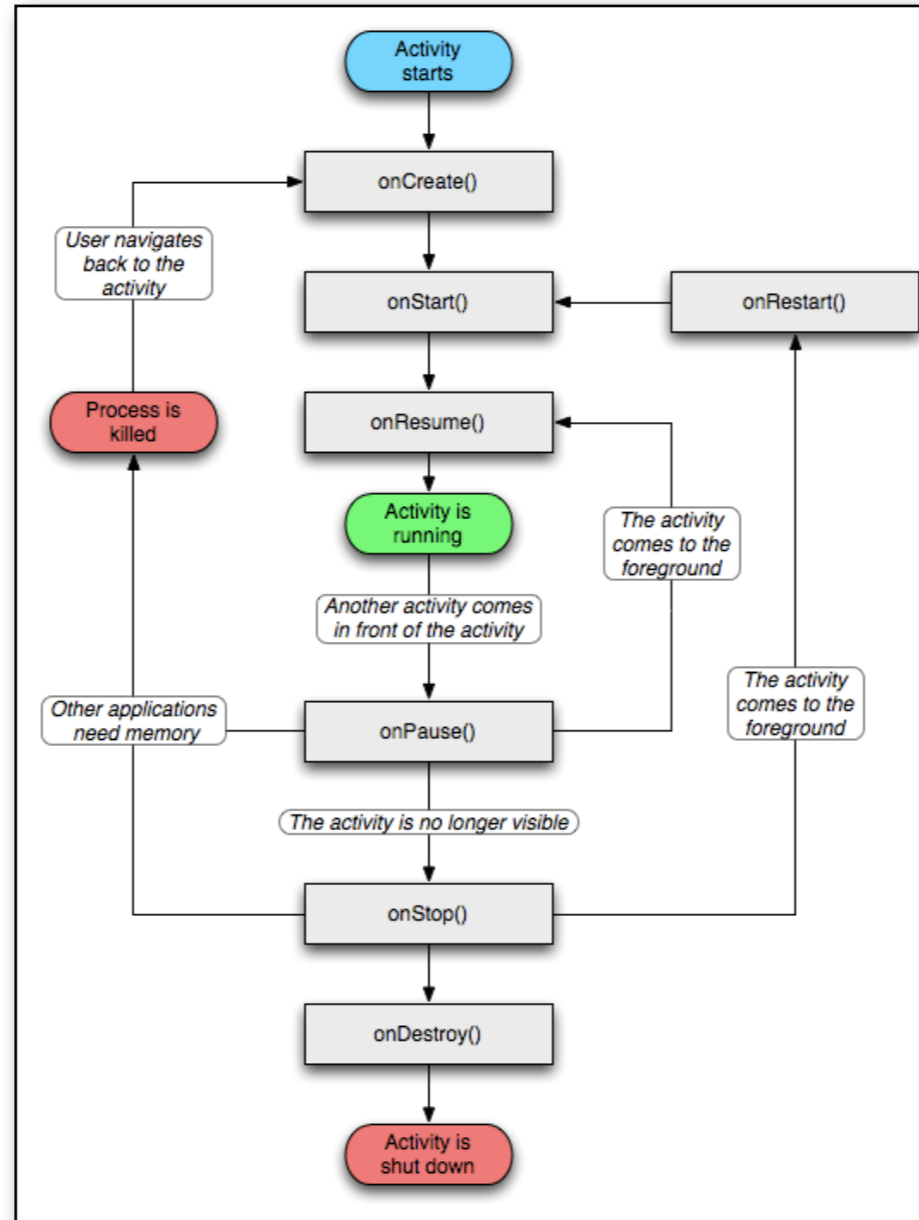

- activity 1 starts
 - activity 2 starts & activity 1 pauses

- activity 1 starts
 - activity 2 starts & activity 1 pauses
 - activity 2 stops

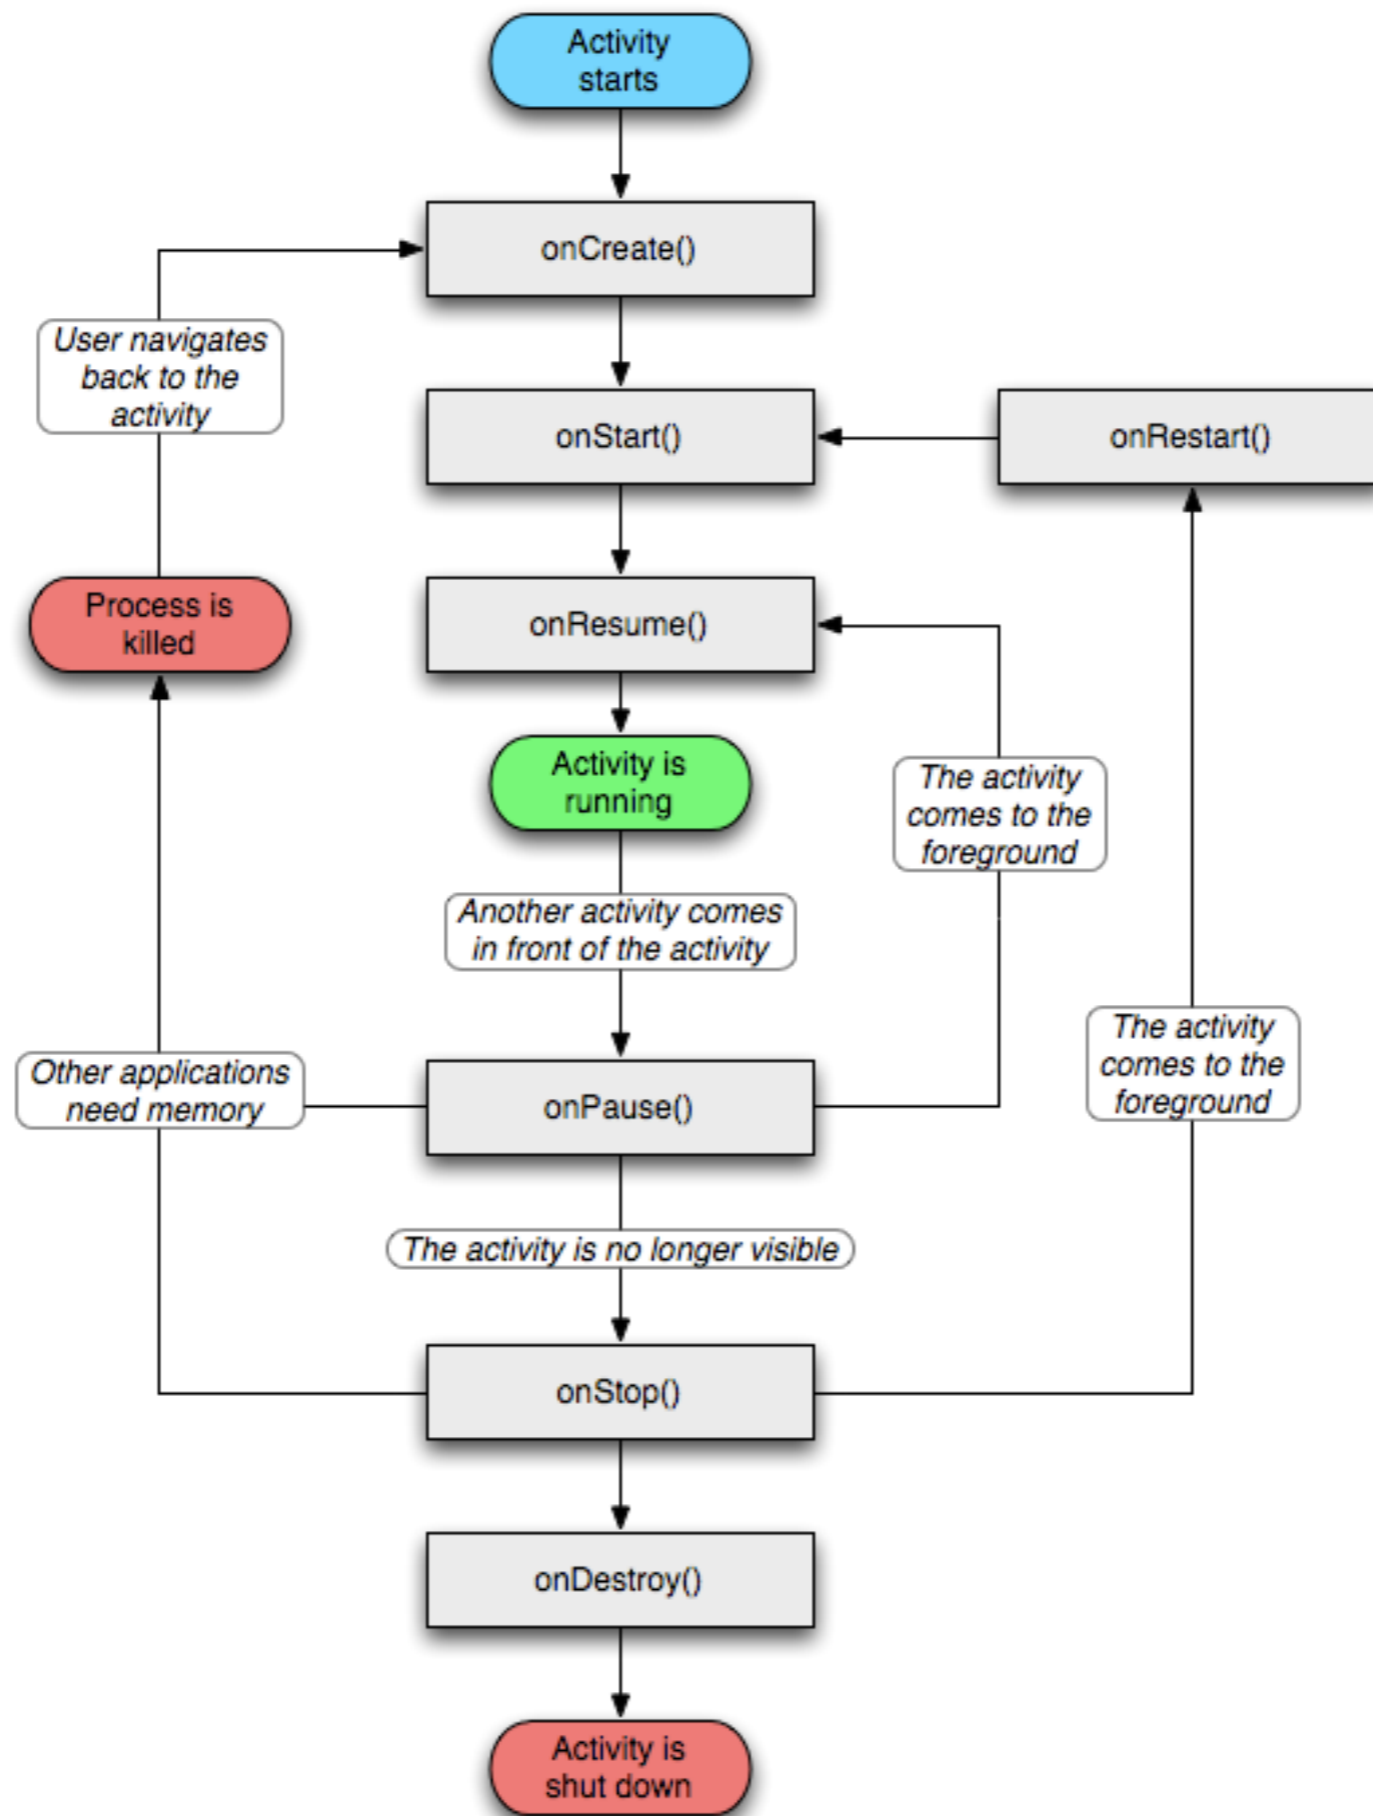

Activities (2)

- activity 1 starts
 - activity 2 starts & activity 1 pauses
 - activity 2 stops
- activity 1 resumes

Activities (3)

▶ ACTIVITY LIFE CYCLE

Writing (native) Android applications (3)

- **Activities**
- **Layouts**
- **Intents**

Layouts (1)

- Get stuff onto your display

- Get stuff onto your display
- Created as XML resources

- Get stuff onto your display
- Created as XML resources
- “inflated” by android (costly)

Layouts (2)

- `LinearLayout` Single column or row
- `TableLayout` `<table> </table>`
- `FrameLayout` `<placeholder>`
- `RelativeLayout`

Layouts (2)

- LinearLayout
- TableLayout
- FrameLayout
- RelativeLayout

Single column or row

```
<table> </table>
```

```
<placeholder>
```

Layouts (3)

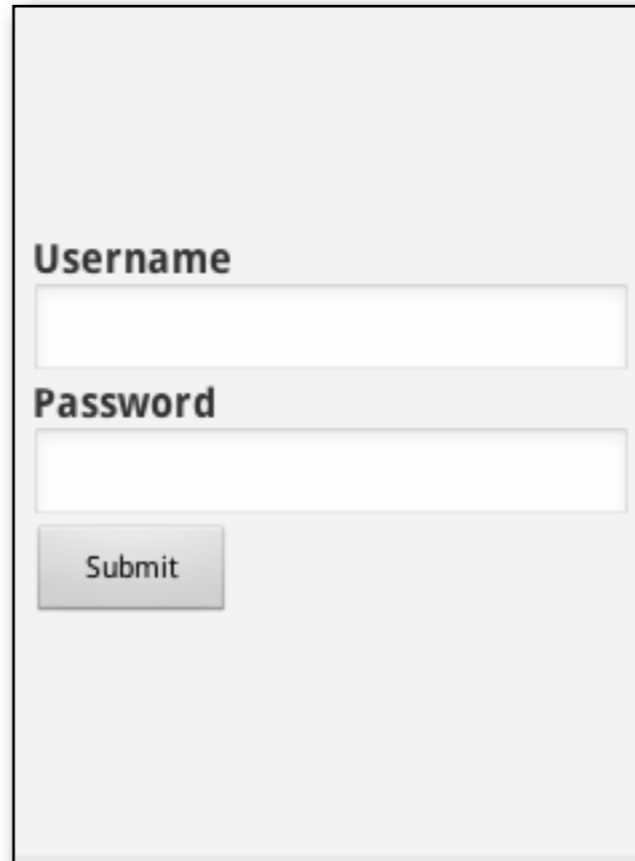

Layouts (4)

XML

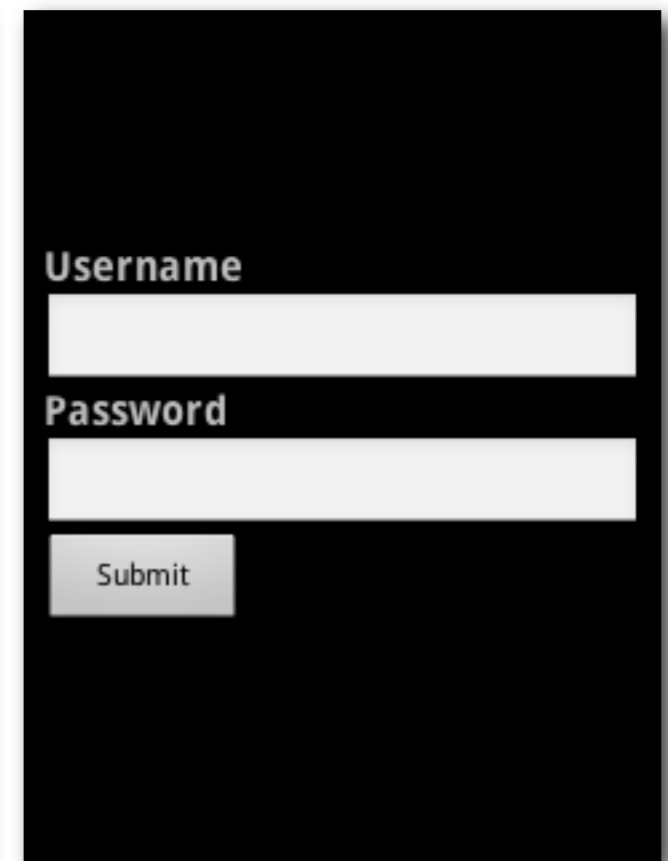

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
  xmlns:android="http://schemas.android.com/apk/res/android"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:alwaysDrawnWithCache="true">
  <TableLayout
    android:id="@+id/tableLayout1"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:layout_gravity="center_vertical"
    android:layout_margin="10dip">
    <TableRow
      android:id="@+id/tableRow5"
      android:layout_width="wrap_content"
      android:layout_height="match_parent">
      <TextView
        android:layout_height="wrap_content"
        android:layout_width="wrap_content"
        android:textStyle="bold"
        android:id="@+id/TextView01"
        android:textSize="20dip"
        android:text="Username"></TextView>
      </TableRow>
    </TableLayout>
  </LinearLayout>
  ....
```

Light theme

A screenshot of a login form in a light theme. The background is light gray. The form consists of two text input fields, one for "Username" and one for "Password", both with light gray borders. Below the password field is a "Submit" button with a light gray background and a dark gray border. The text labels "Username" and "Password" are in a bold, dark gray font.

Dark (normal) theme

A screenshot of the same login form in a dark theme. The background is black. The form consists of two text input fields, one for "Username" and one for "Password", both with white borders. Below the password field is a "Submit" button with a dark gray background and a white border. The text labels "Username" and "Password" are in a bold, white font.

DEFINING ANDROID LAYOUTS

Writing (native) Android applications (3)

- **Activities**
- **Layouts**
- **Intents**

Intents (1)

- “message queue” between different android components.

- “message queue” between different android components.
- Explicit & implicit intents

Intents (2)

Start a new activity (explicit):

```
Intent myIntent = new Intent ();  
myIntent.setClass(class.this, com.another.class);  
myIntent.putExtra("Data", "somedata");  
startActivity(myIntent);
```

Start a new activity (explicit):

```
Intent myIntent = new Intent ();  
myIntent.setClass(class.this, com.another.class);  
myIntent.putExtra("Data", "somedata");  
startActivity(myIntent);
```

Dial a number (implicit):

```
Intent intent = new Intent(Intent.ACTION_DIAL, Uri.parse("tel:123-456789"));  
startActivity(intent);
```

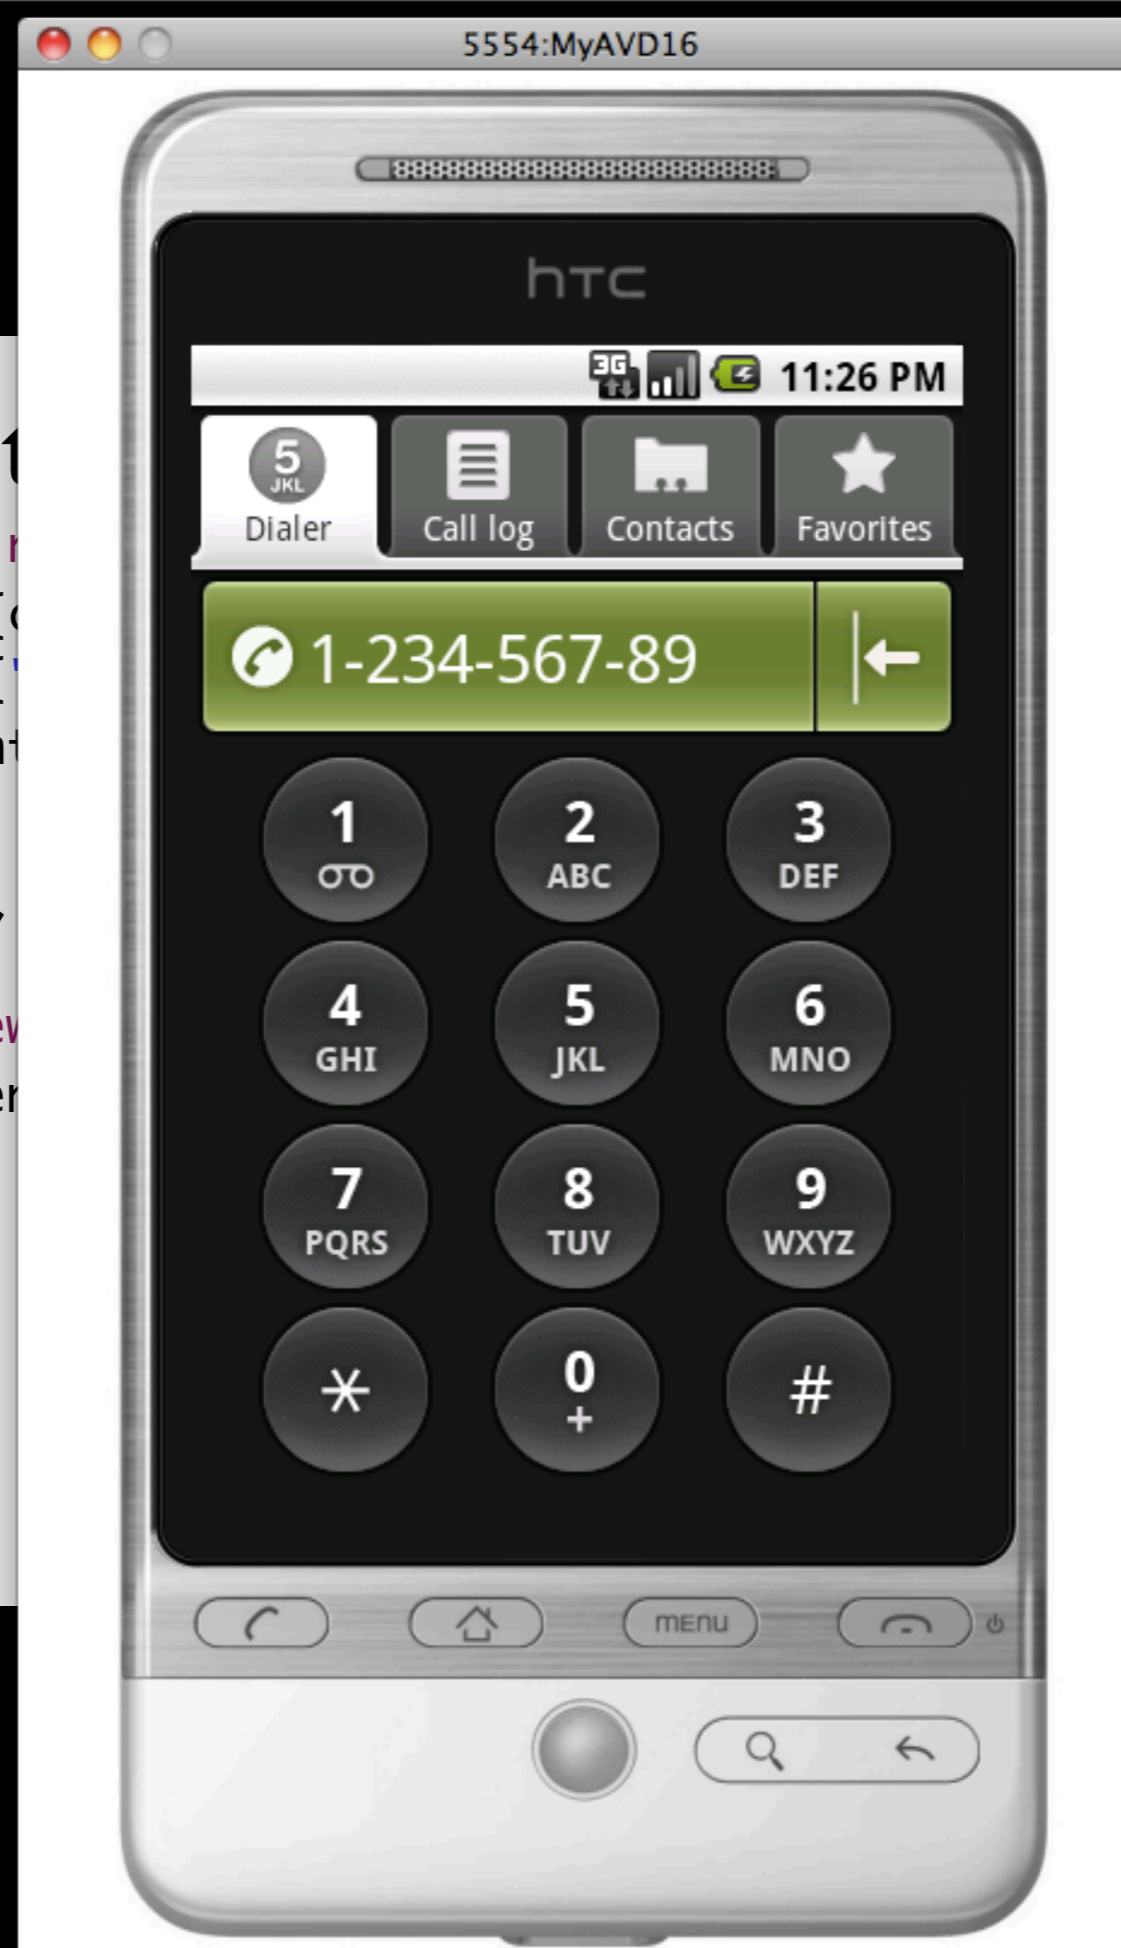

Intents (2)

Start a new activity

```
Intent myIntent = new Intent();  
myIntent.setClass(this, MyActivity.class);  
myIntent.putExtra("key", "value");  
startActivity(myIntent);
```

Dial a number

```
Intent intent = new Intent(Intent.ACTION_DIAL, Uri.parse("tel:123-456789"));  
startActivity(intent);
```

```
Intent intent = new Intent(Intent.ACTION_DIAL, Uri.parse("tel:123-456789"));  
startActivity(intent);
```

Start a new activity (explicit):

```
Intent myIntent = new Intent ();  
myIntent.setClass(class.this, com.another.class);  
myIntent.putExtra("Data", "somedata");  
startActivity(myIntent);
```

Dial a number (implicit):

```
Intent intent = new Intent(Intent.ACTION_DIAL, Uri.parse("tel:123-456789"));  
startActivity(intent);
```

Intents (3)

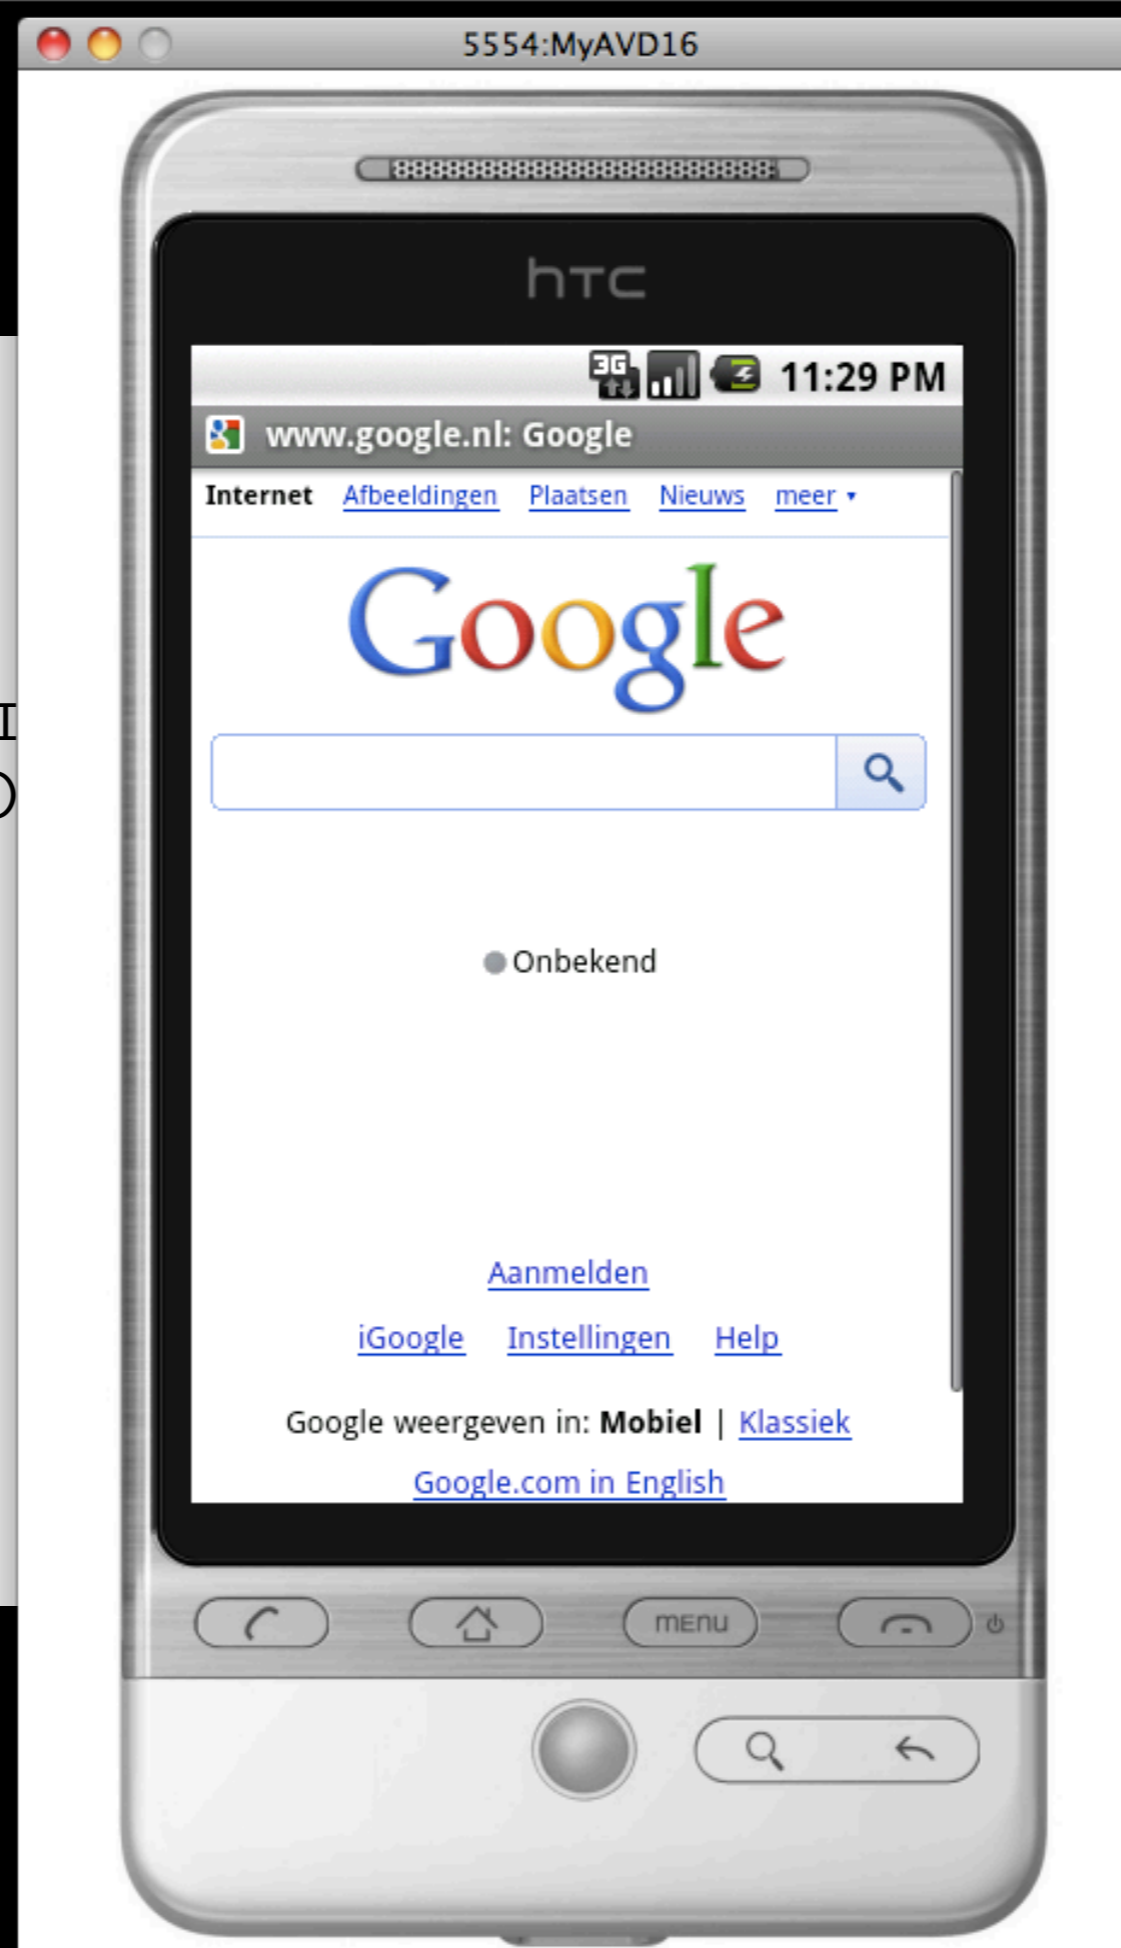

Visit a website (implicit):

```
Intent intent = new Intent(Intent.ACTION_VIEW, Uri.parse("http://www.google.com"));
startActivity(intent);
```

Intents (3)

Visit a website

```
Intent intent = new Intent();  
startActivity(intent);
```

```
tp://www.google.com"));
```

Visit a website (implicit):

```
Intent intent = new Intent(Intent.ACTION_VIEW, Uri.parse("http://www.google.com"));
startActivity(intent);
```

Visit a website (implicit):

```
Intent intent = new Intent(Intent.ACTION_VIEW, Uri.parse("http://www.google.com"));
startActivity(intent);
```

Open Google Maps (implicit):

```
Intent intent = new Intent(Intent.ACTION_VIEW, Uri.parse("geo:52.257651,21.058044?z=17"));
startActivity(intent);
```

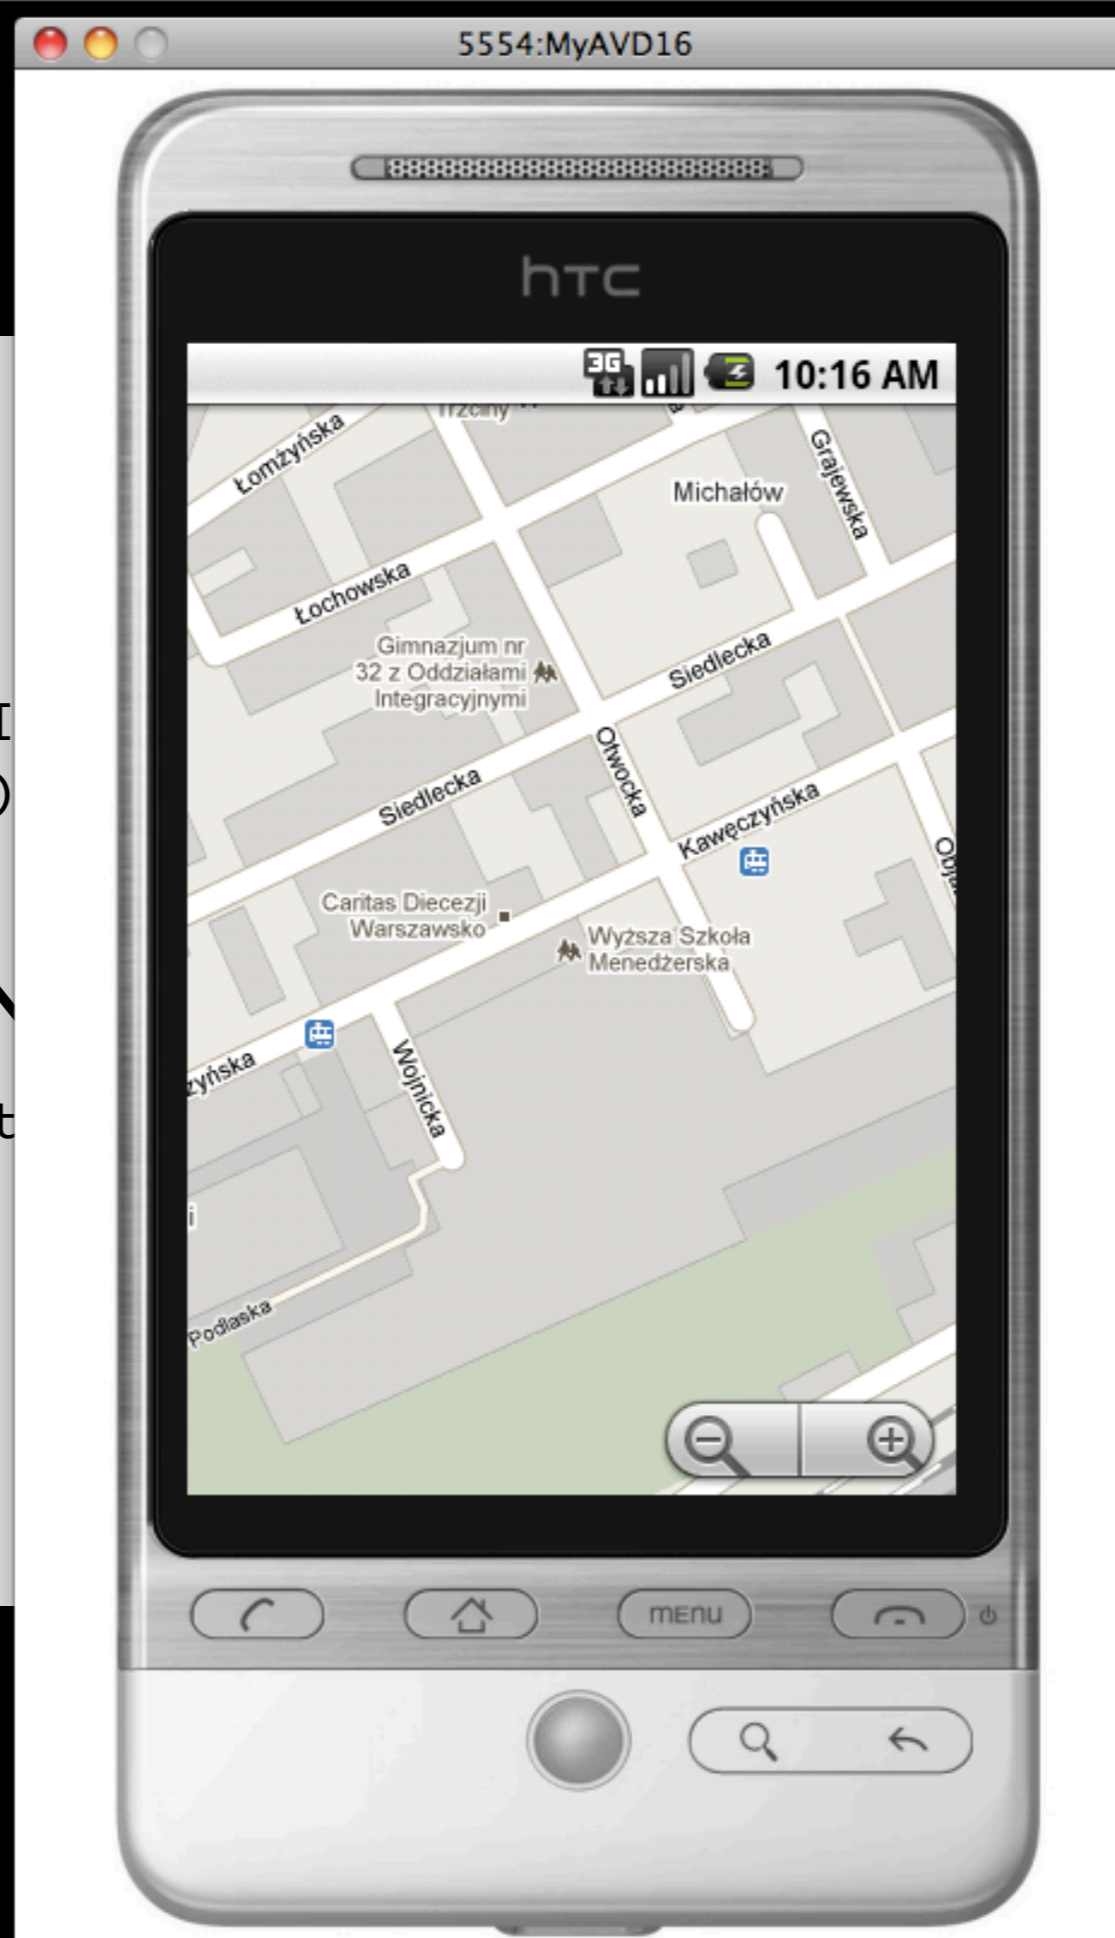

Intents (3)

Visit a website

```
Intent intent = new Intent();  
startActivity(intent);
```

Open Google Maps

```
Intent intent = new Intent();  
startActivity(intent);
```

```
tp://www.google.com"));
```

```
52.257651,21.058044?z=17"));
```

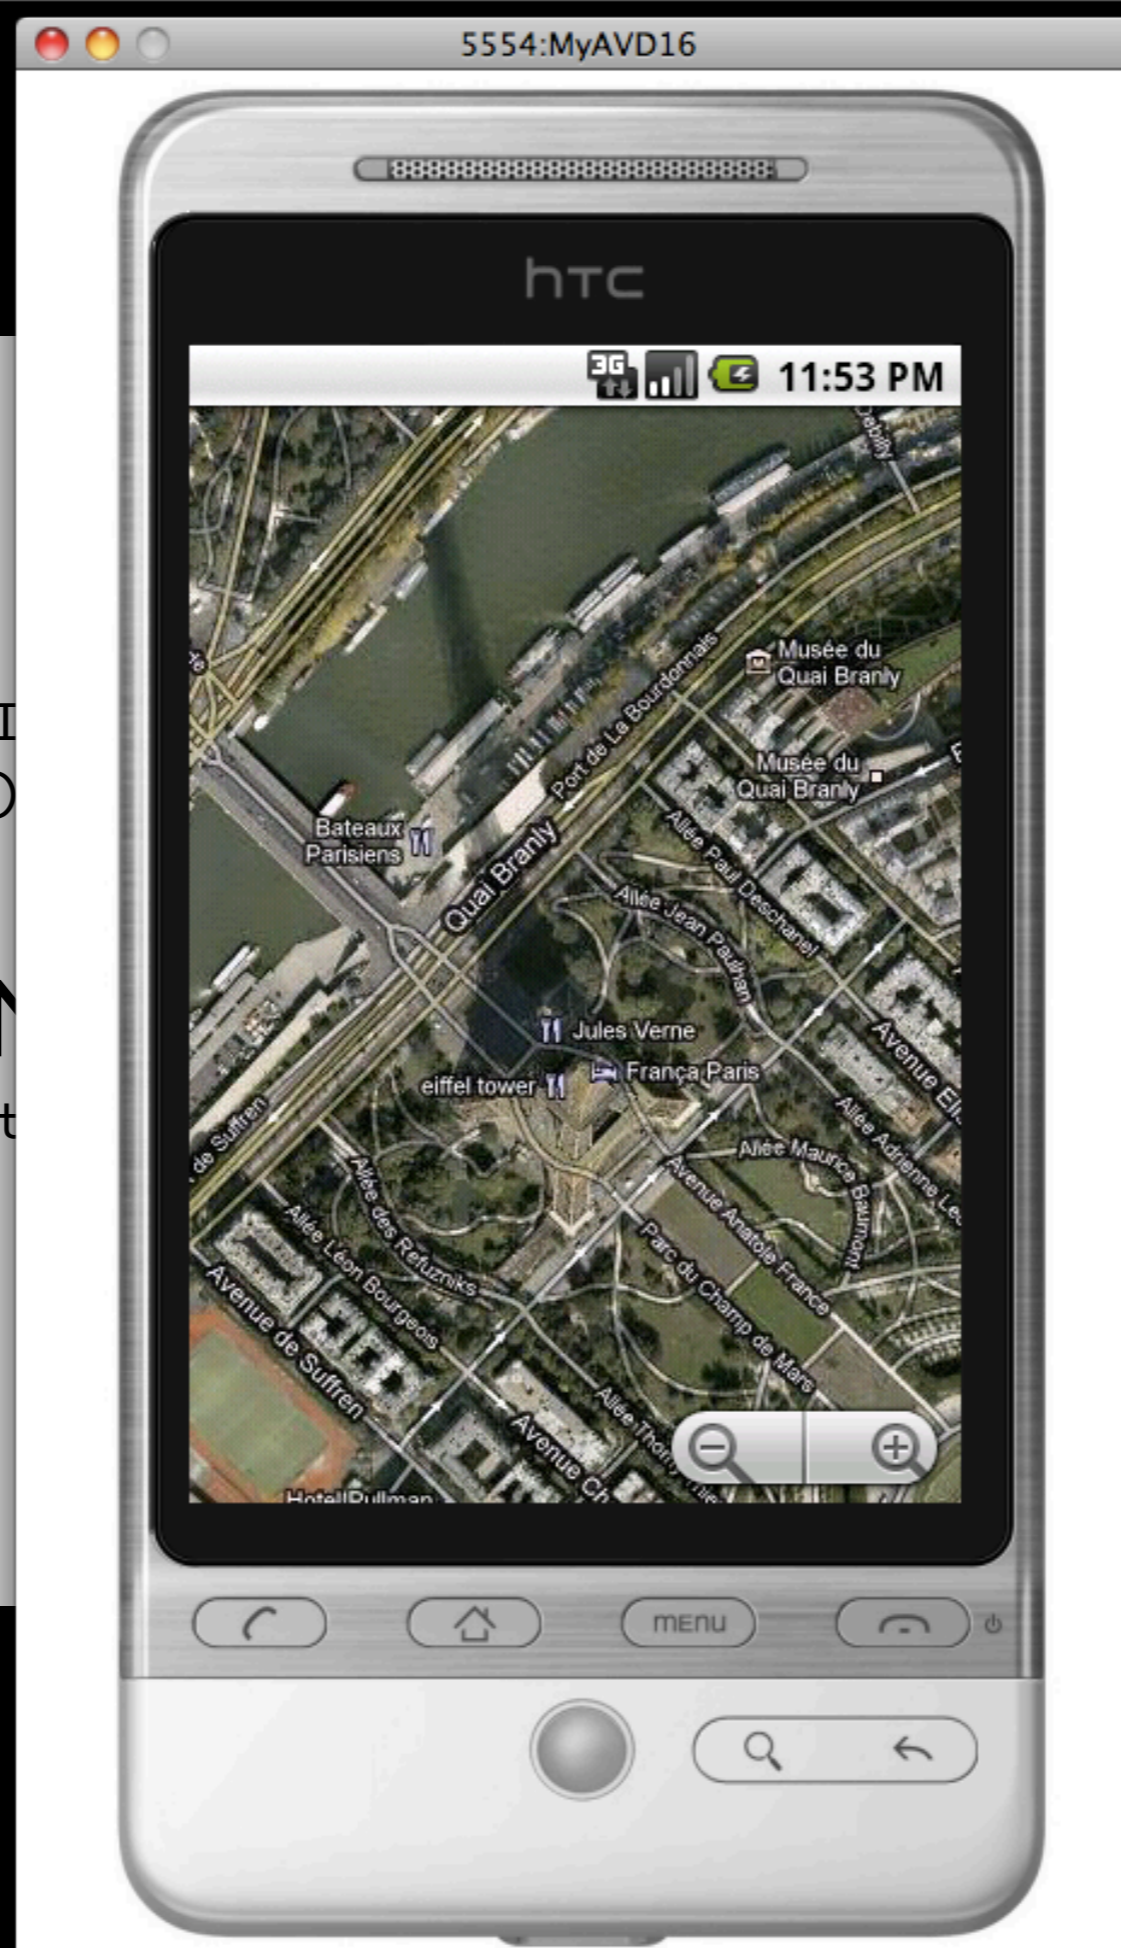

Intents (3)

Visit a website

```
Intent intent = new Intent();  
startActivity(intent);
```

Open Google Maps

```
Intent intent = new Intent();  
startActivity(intent);
```

```
tp://www.google.com"));
```

```
52.257651,21.058044?z=17"));
```

}
```

▶ REMEMBER: TMTOWTDI!

Code examples (3)

```
package com.fourdevelopers;

import android.app.Activity;
import android.os.Bundle;
import android.view.View;
import android.view.View.OnClickListener;
import android.widget.Button;
import android.widget.Toast;

public class main extends Activity implements OnClickListener {

    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.main);

        Button button = (Button)findViewById(R.id.button1);
        button.setOnClickListener(this);
    }

    public void onClick(View v) {
        Toast.makeText(this, "Button clicked", Toast.LENGTH_SHORT).show();
    }

}
```

Imports

▶ REMEMBER: TMTOWTDI!

Code examples (3)

```
package com.fourdevelopers;

import android.app.Activity;
import android.os.Bundle;
import android.view.View;
import android.view.View.OnClickListener;
import android.widget.Button;
import android.widget.Toast;

public class main extends Activity implements OnClickListener {

    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.main);

        Button button = (Button)findViewById(R.id.button1);
        button.setOnClickListener(this);
    }

    public void onClick(View v) {
        Toast.makeText(this, "Button clicked", Toast.LENGTH_SHORT).show();
    }

}
```

Imports

Implement click listener

▶ REMEMBER: TMTOWTDI!

Code examples (3)

```
package com.fourdevelopers;
```

```
import android.app.Activity;  
import android.os.Bundle;  
import android.view.View;  
import android.view.View.OnClickListener;  
import android.widget.Button;  
import android.widget.Toast;
```

Imports

```
public class main extends Activity implements OnClickListener {
```

```
    public void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.main);
```

```
        Button button = (Button)findViewById(R.id.button1);  
        button.setOnClickListener(this);  
    }
```

Implement click listener

Connect click listener to button

```
    public void onClick(View v) {  
        Toast.makeText(this, "Button clicked", Toast.LENGTH_SHORT).show();  
    }
```

```
}
```

▶ REMEMBER: TMTOWTDI!

Code examples (3)

```
package com.fourdevelopers;
```

```
import android.app.Activity;  
import android.os.Bundle;  
import android.view.View;  
import android.view.View.OnClickListener;  
import android.widget.Button;  
import android.widget.Toast;
```

Imports

Implement click listener

```
public class main extends Activity implements OnClickListener {
```

```
    public void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.main);
```

Connect click listener to button

```
        Button button = (Button)findViewById(R.id.button1);  
        button.setOnClickListener(this);
```

```
    }
```

Called when "something" is clicked

```
    public void onClick(View v) {
```

```
        Toast.makeText(this, "Button clicked", Toast.LENGTH_SHORT).show();
```

```
    }
```

```
}
```
