

*Mobile broadband and IPv6 in Slovenia,
DSMIP6-TLS and GEN6 project*

jan@go6.si

About me (in a glance)

- Founder and CEO of Slovenian Go6 Institute
- Determined IPv6 advocate, mercenary and fundamentalist
- IPv6 consultant for many Slovenian operators and enterprises
- Working in Internet operations for 21 years
- 12 years ago touched IPv6
- Active and contributing member of RIPE and IETF community
- Primary co-author of RIPE-501 IPv6 procurement doc
- Co-author of RFC 6346 (A+P approach to IPv4 depletion)
- Frequent IPv6 Flyer (Google IPv6 implementors conference, OECD meeting, RIPE, different government meetings, etc...)

Cooperation work: Go6 as a catalyst

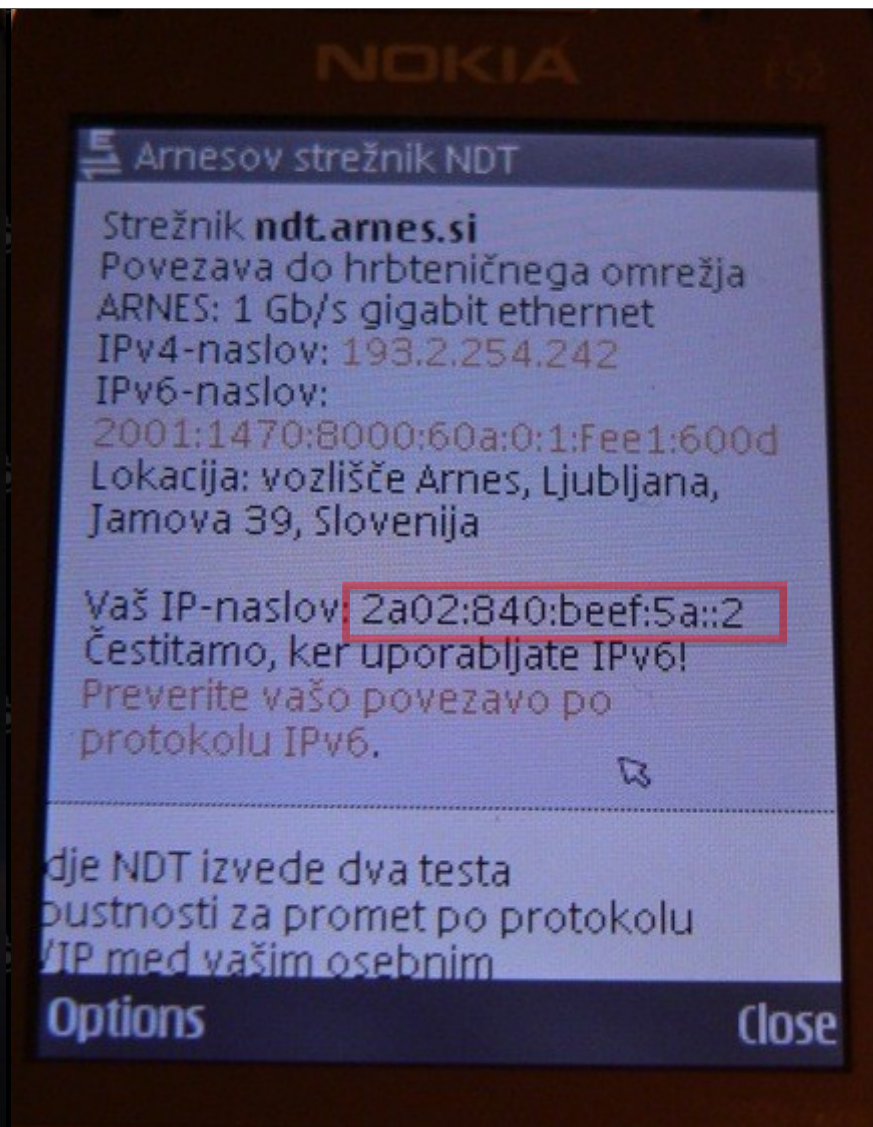

Disclaimer:

IPv6 in Slovenia is being promoted by the Go6 institute, this is an industry body (important message here: self regulation can work!!!) and here is one of our success stories.

Go6 as an IPv6 catalyst got 2 mobile operators **together** deploying IPv6 on 3GPP **at the same time** and here is how they did it.

Možnosti Zapri

Mobitel and IPv6

- Packet core is IPv6 ready
- IPv6 only PDP context
 - IPv4 and IPv6 in same PDP context not supported jet
- 6VPE over MBICORE
 - Static routing

Terminals

- Each terminal gets /64
- Problems with IPv6 PPP and DNS
 - Manual config
- Limited terminal support
 - Nokia E and N series → OK
 - Window mobile 6.1 → No support
 - Data cards → Natively no support

Versions of software used:

- SGSN Ericsson Mk IV 2008B Dual Access
- GGSN Ericsson/Juniper J120 2009A
- MPLS Cisco 7609 Version 12.2(33)SRC2

Show stoppers...

What is still missing?

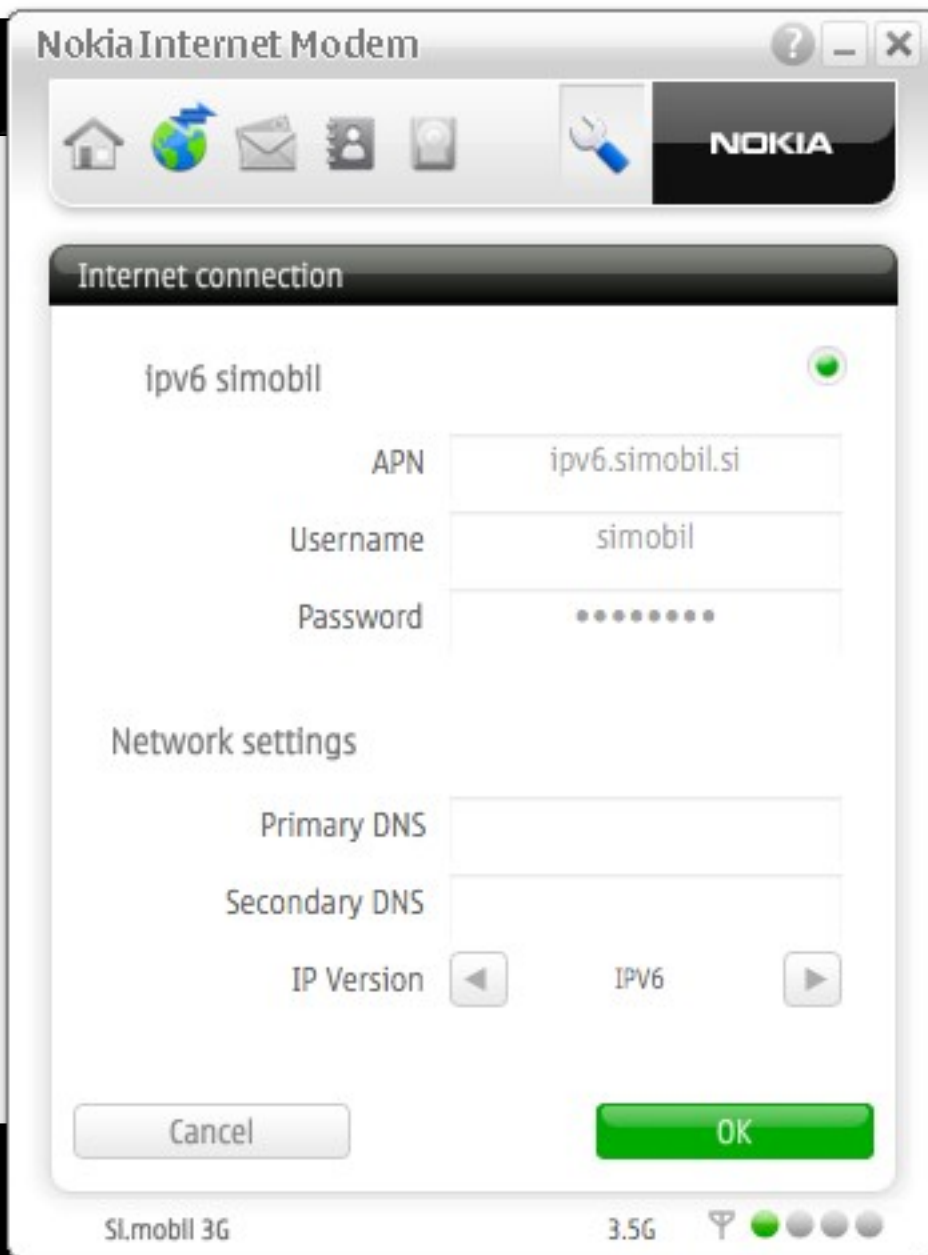

- No wide support in mobile terminals (Symbian, Meego and Android 4)
- Content based charging – not existent
- Limited or no support for dual-stack in terminals

Simobil network

- Test IPv6 enabled APN was fully functional in December 2011
- Dual-stacked (IPv4 and IPv6 PDP connections possible)
- Cisco GGSN will support PDPv4v6 in Q1 2012

Nokia is ahead with IPv6 on mobile devices (21M-02)

Samsung Galaxy Nexus (Android 4) - IPv6 on 3G capable

The image shows three screenshots from a Samsung Galaxy Nexus (Android 4) device. The left screenshot is the home screen with a blue background and a clock showing 11:35 and 43% battery. A notification for 'mobile' displays the IPv6 address 2a02:e20:3010:2:2cb9:f4c8:6475:8d48%6. The middle screenshot shows a browser page from 'whatismyip6address.com' displaying the IPv6 address 2a02:e20:3010:2:2cb9:f4c8:6475:8d48. The right screenshot shows the 'Edit access point' settings menu with the 'APN protocol' set to 'IPv6'.

Home Screen: 11:35, 43% battery, Moderate, mobile notification: 2a02:e20:3010:2:2cb9:f4c8:6475:8d48%6, WiFi Disabled, Camera.

Browser (whatismyip6address.com): This page shows your IPv6 and/or IPv4 address. You are connecting with an IPv6 Address of: 2a02:e20:3010:2:2cb9:f4c8:6475:8d48. Tests: IPv4 only Test, Normal Test, IPv6 only Test. You can access this page with any of these easy to remember url's: ip4.me, ip6.me, whatismyv6.com, whatismyip6address.com.

Settings (Edit access point): APN protocol: IPv6 (selected), IPv4, IPv4/IPv6, Cancel.

IPv6 in 3rd Generation Partnership Project (3GPP) Evolved Packet System (EPS)

Abstract

The use of cellular broadband for accessing the Internet and other data services via smartphones, tablets, and notebook/netbook computers has increased rapidly as a result of high-speed packet data networks such as HSPA, HSPA+, and now Long-Term Evolution (LTE) being deployed. Operators that have deployed networks based on 3rd Generation Partnership Project (3GPP) network architectures are facing IPv4 address shortages at the Internet registries and are feeling pressure to migrate to IPv6. This document describes the support for IPv6 in 3GPP network architectures.

Dual Stack Mobile IPv6

CONNECTING PEOPLE

GEN6 facts

■ GEN6 – Governments ENabled with IPv6

■ Project time frame

- 1.1.2012 – 30.6.2014

■ 19 EU partners

■ EC reference

- [http://](http://ec.europa.eu/information_society/apps/projects/factsheet/index.cfm?project_re)

- ec.europa.eu/information_society/apps/projects/factsheet/index.cfm?project_re

■ Slovenian pilot

- IPv6 enabled self organizing systems for emergency response environments

Slovenian Stakeholders

- **Official GEN6 partner**
 - **Laboratory for Telecommunications, Faculty of Electrical engineering, University of Ljubljana (www.ltfe.org)**
 - system development and integration
 - pilot deployment and testing
- **Technical partners – non beneficial**
 - **Go6 institute (go6.si)**
 - Federating and consultancy role
 - **Ministry for higher education, science and technology (www.mvzt.si)**
 - Integration of project in Slovenian government
 - **Fire department – Municipal of Ljubljana (www.gasilskazveza-lj.si)**
 - Pilot system requirements and pilot testing
 - **Cisco System Slovenia (www.cisco.si)**
 - Networking equipment support
 - **EION Wireless (www.eionwireless.com)**
 - Wireless solution support

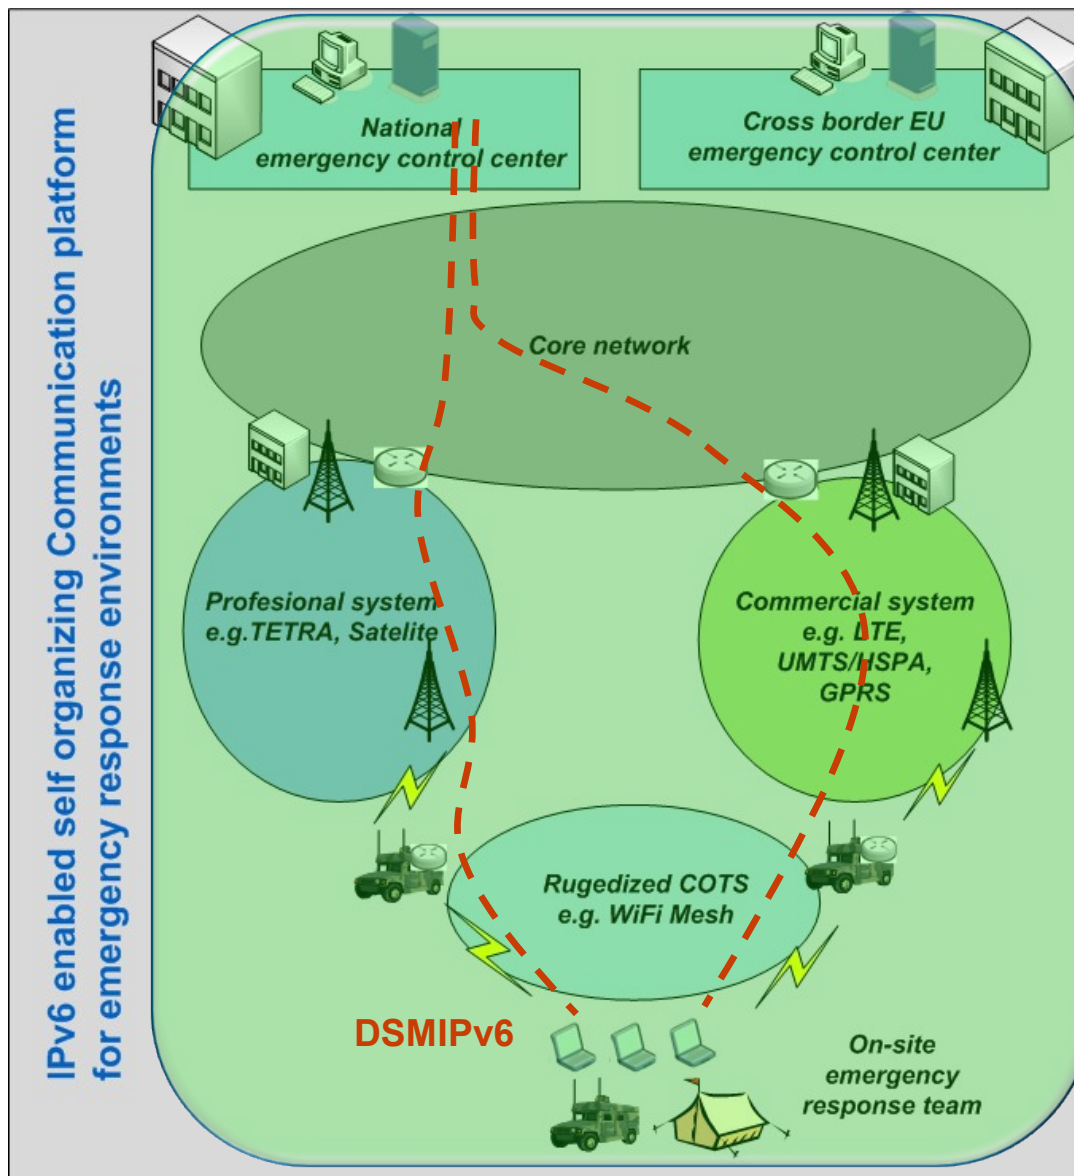

Slovenian pilot

- **Project will clearly demonstrate state-of-the-art IPv6 enabled features for emergency response environments**
 - **Seamless connectivity from targeted/affected areas across heterogeneous technologies and cross border and public**
 - e.g. UMTS/HSPA, LTE, Satellite, DMR, TETRA, ruggedized COTS - WiFi
 - **Automatic network/system planning and deployment**
 - **Node and host auto configuration, self organizing and healing network features**
 - **Secure and QoS enabled transmission of data, voice and multimedia rich services supported system**
 - **Overlay network for data transport and service functionalities will be done on DSMIP6 (dual stack mobile IPv6)**

- **Pilot system deployment in live environment**
 - **Testing and demonstration of smart IPv6 network features**

High level system view

Target domain – Fire department

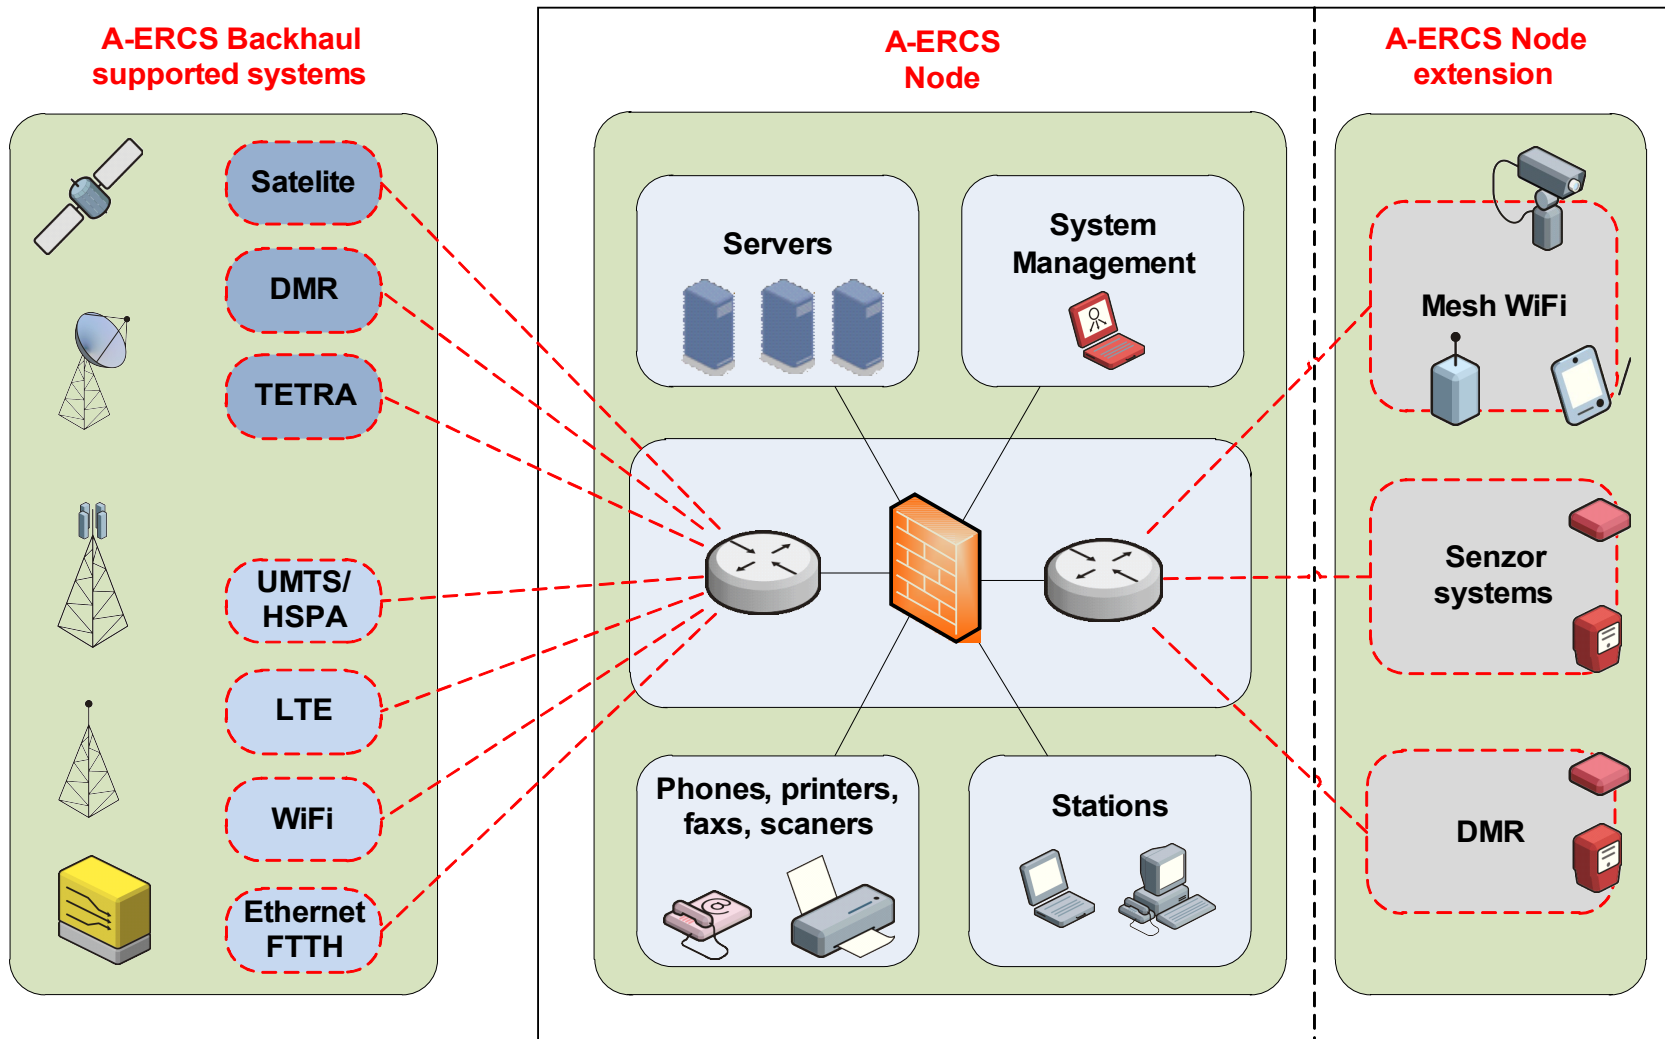

- On site mobile command center
- Operation support vehicle
 - Current system capabilities
 - DMR radio – backhaul & on site
 - LAN/WiFi environment in vehicle
 - UMTS – internet access (IPv4)
 - P2T radio
 - Supported services
 - Voice – 1. priority
 - Messages – 2. priority
 - Internet

A-ERCS Node – draft proposal

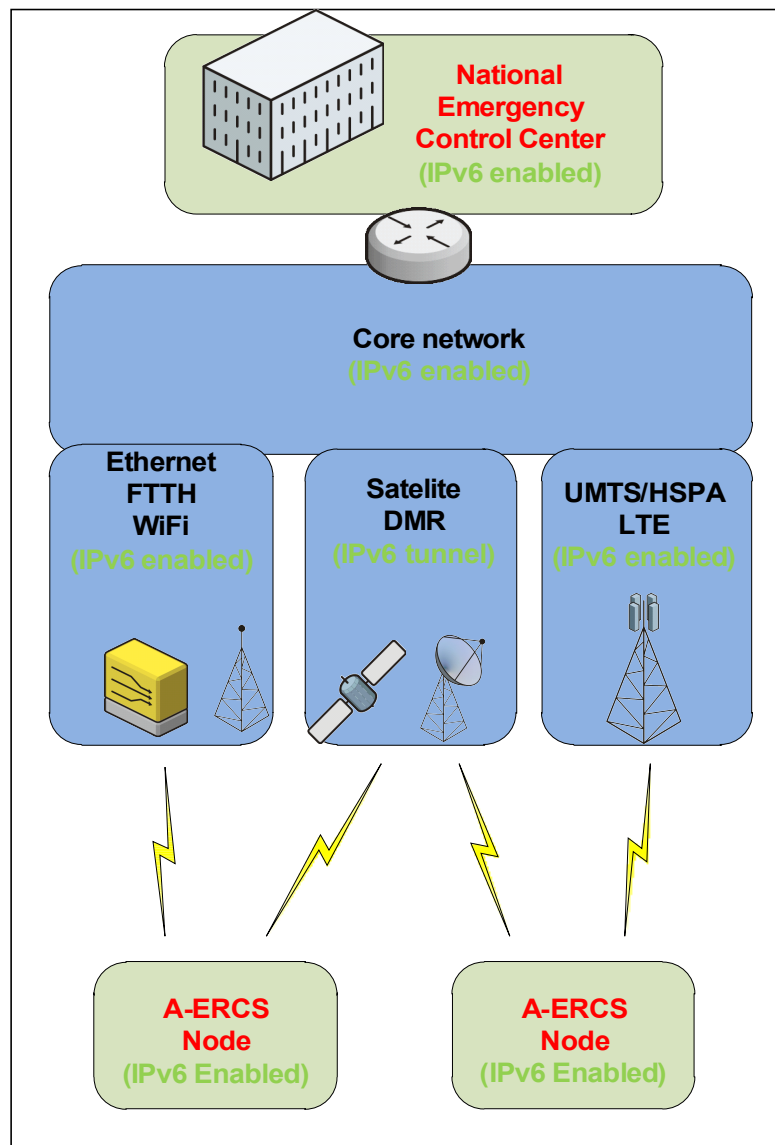

■ On site mobile command center as A-ERCS Node

A-ERCS system – draft proposal

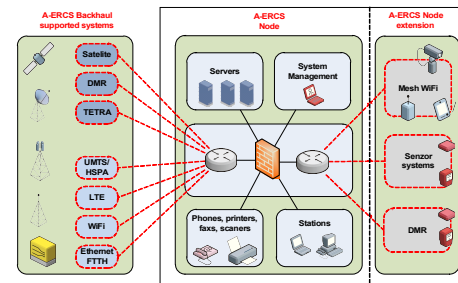

- **A-ERCS system**
 - **A-ERCS Node connectivity options**

Pilot target 1

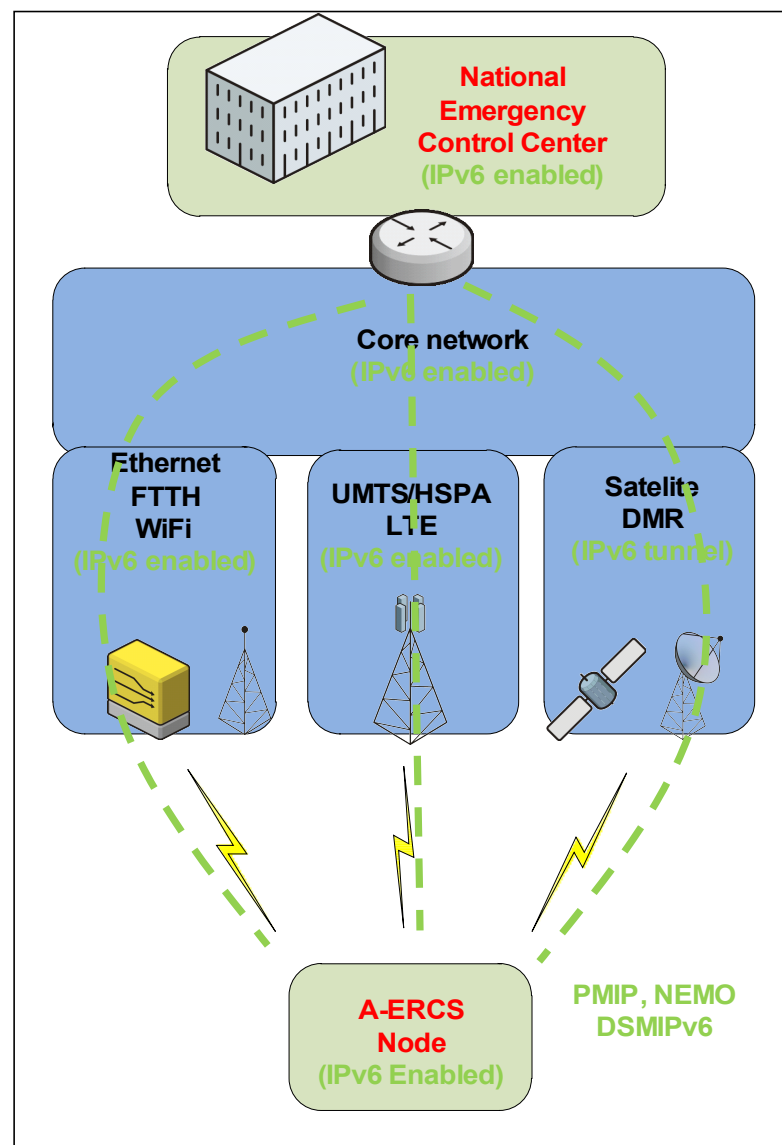

- **Demonstrating IPv6 network enable features in A-ERCS**
 - **Hosts and network nodes auto configuration**
 - SLAAC, DHCPv6
 - **Seamless/ad-hoc routing and self organizing network**
 - demonstrating high availability and self healing system features with OSPFv3
 - **Mobility support**
 - DSMIPv6, Proxy Mobile IPv6 for nodes and network mobility (NEMO)
 - **Multicast transmission**
 - Scope identifier for limiting multimedia/live content reachability
 - MLDv2/PIM-SSM for live multimedia streaming locally and globally
 - **Quality of service support with DiffServ and Flow label enablement in local and global network environment**

Pilot target 2

- **IPv6 seamless host mobility and universal host/network connectivity between**
 - **mobile node reachability**
 - Ability to connect to mobile node from operations center
 - Connect to any service directly (e.g. VOIP call to SIP client, check the temperature on fireman's clothes sensor, engage GPS on MN)
- **heterogeneous networks/technologies support**
 - commercial (e.g. UMTS/HSPA, LTE)
 - professional (e.g. DMR, Satellite)
 - alternative ruggedized COTS networking systems (e.g. mesh enabled wifi 802.11a/g/n)
